THSG is a network of health professionals, transport professionals and environmental and community groups who seek to promote a healthy transport system. THSG believes that a healthy transport system would use active travel for shorter journeys, the train/cycle combination for longer journeys and high speed rail rather than air for international travel, but would also reduce travel by home working and meetings in cyberspace. This agenda has synergies with environmentally sustainable transport. Please visit http://www.transportandhealth.org.uk/
